## Thanks for keeping it clean!

Dog waste left on the ground pollutes local streams and is a public health risk.

Dog waste carries high levels of harmful E. coli bacteria and other pathogens.

When it rains, the bacteria from dog waste washes into stormdrains that lead directly to local streams, ponds, and lakes. Water polluted with dog waste can cause serious illness in humans and wildlife.

Dog owners—we need your help!

- Always carry a bag to pick up pet waste.
- Dispose of waste in a trash can—never in a stormdrain.

Leaving dog waste on the ground is unneighborly, a serious public health issue, and often times punishable by fines.

Pick up after your dog. Protect our water.  
[www.nepwater.org](http://www.nepwater.org)

Bacteria and parasites from dog waste are a major source of pollution for water quality and human health. Health problems include:

- **Campylobacteriosis:** A bacterial infection that causes diarrhea in humans.
- **Giardiasis:** A protozoan infection of the small intestine that can cause diarrhea, cramping, fatigue, and weight loss.
